THERDEX STAIR RENOVATIONS

ABOUT **THERDEX**

Therdex is a high quality flooring brand for those who appreciate stylish and contemporary design. Natural elegance combined with a warm, inviting appearance makes Therdex the ideal foundation for an interior with the ultimate feeling of home. Whether your style is modern, classic, rustic or Scandinavian, Therdex gives every space the character it needs.

A new addition to the collection is the Therdex stair renovation. Several items from the collection can now transition seamlessly from floor to stairs thanks to a smartly developed system. This creates a cohesive look throughout the interior.

THERDEX STAIR RENOVATIONS

Therdex stair renovations provide a high quality finish for your staircase. Made in designs from the existing Therdex LVT collection, they match our floors seamlessly. This way, the stairs and floor together create one unified look throughout the interior.

Within this collection, you can choose from several options for a stair renovation, namely Therdex slabs and overlay stair treads. Both options offer an elegant appearance and meet modern safety standards.

THERDEX DESIGN

The slabs and overlay stair treads align seamlessly with the Therdex LVT floors, as they use the same design.

ANTI SLIP

The trusted anti slip properties of Therdex floors also provide extra grip, stability and safety on the stairs.

LOW MAINTENANCE

The staircase is easy to clean, scratch and stain resistant, and retains its appearance for a long time

SUSTAINABLE

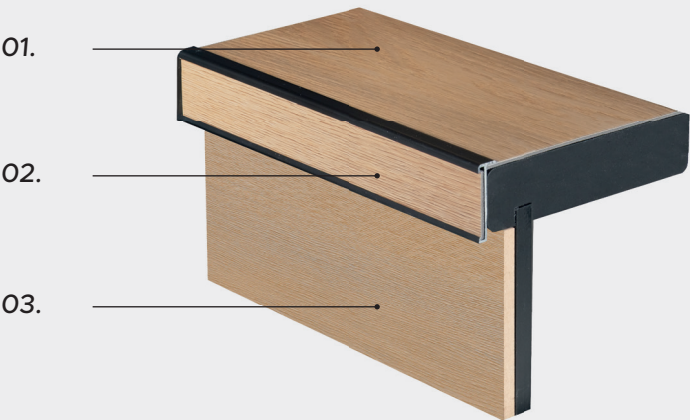

Therdex stands for durable quality. Our products are free from phthalates, making them a responsible choice.

CONSTRUCTION

DRYBACK LVT SLABS

LVT slabs are ideal for stair renovations and offer a finish that matches the quality of our high end floors. The large LVT panel is applied in a single piece, creating a clean and seamless result on both treads and risers.

A complete staircase constructed from slabs consists of three components: the LVT strip for the tread, the nosing strip for a neat transition, and the riser for the vertical side. The slab has a multi-layer construction, with a strong PU top layer for extra protection, natural embossing, and a wear layer that can withstand intensive use.

- 03. LVT riser

MDF STAIR TREADS

MDF stair treads offer a sleek, seamless finish thanks to their unique one-piece design. The sturdy MDF base provides stability, while the wear-resistant LVT top layer protects the steps from wear and tear. A transparent PU layer offers extra protection and a natural-looking embossing.

A staircase can be constructed from four components: the top of the step, the bottom of the step in an open staircase, the nosing, and the riser in a closed staircase. Together, these components form an integrated whole that is easy to install and results in a sleek, uniform staircase finish.

SUSTAINABLY RESPONSIBLE

The staircase is a defining element in the interior and therefore deserves to be chosen with care. A Therdex staircase renovation not only offers style and appearance, but is also a durable and high-quality solution.

What is LVT?

LVT is a versatile material made from a combination of petroleum (43%) and salt (57%). By adding bio based plasticizers, it becomes flexible and strong. Therdex uses sustainable plasticizers based on soybean oil, ensuring an environmentally friendly, durable and wear resistant finish for your staircase.

A Therdex stair renovation stands for style, quality and sustainability. With luxury LVT slabs or solid MDF overlay stair treads, your staircase perfectly matches your interior and is built to last. This way, you make a choice that is good for both your home and the environment.

ECO FRIENDLY

Therdex is committed to environmentally conscious production and chooses safe, green materials such as bio-plasticizers.

DURABLE

Stair renovation with LVT offers a durable solution that will last for years, even with intensive use.

THE STAIR RENOVATION COLLECTION

The Premier series from our collection offers a unique opportunity to match your stairs and floor. This series gives your stairs the same refined, matte finish as your floor, creating a whole that exudes luxury and unity.

Inspired by the most beautiful wooden floors, the Premier series offers a sleek, knot-free design.

INSTALLATION

Our advice is to always have staircase renovation carried out by a certified Therdex dealer, so that quality and finish are guaranteed.

01. measuring

Accuracy is the foundation of Therdex stair renovations. Our stair specialists carefully measure each staircase to ensure that the stair covering fits perfectly.

02. production

The stair treads are manufactured based on the exact measurements, made from LVT slabs or MDF overlay treads.

03. placing

The stair covering is firmly and securely glued to the existing stair treads. This ensures a strong attachment, regardless of the variant chosen. The stair nose may need to be shortened to prevent the MDF stair tread from sticking out at the side.

04. finishing

The sleek finish of the edges and corners gives the overall look a uniform appearance.

05. completion

After a final inspection, the renovated staircase is delivered. Our specialists ensure a perfect end result.

MAINTENANCE & CARE

Cleaning your Therdex staircase is limited to vacuuming and mopping the stairs. Start cleaning the stairs 48 hours after installation. We recommend using the James Basic Cleaner for this.

James is our trusted partner when it comes to cleaning products, and is therefore the brand we will always recommend. For more information, visit www.james.eu.

01. vacuum

Remove loose dirt by vacuuming. Fit the vacuum cleaner with a soft brush to prevent scratches.

02. wipe with a cloth

When cleaning the stairs, use a damp microfiber cloth. Rinse the cloth in clean water and wring it out thoroughly so that the stairs do not become too wet and the finish is preserved.

03. clean with James

Add James Floor Cleaner Clean & Quick Dry to the bucket of mop water. This product cleans the matte PU layer of the LVT surface without affecting the appearance of the stairs.

04. remove moisture immediately

Do not allow the floor to become unnecessarily wet. It is best to wipe up damp spots immediately.

PERIODIC CLEANING

For thorough cleaning of LVT stairs, we recommend James Basic Cleaner. This removes stubborn dirt and restores the stairs to their original condition. This basic cleaner is also a good choice for stains and streaks. Do this at least twice a year, or more often if desired.

DIRT FROM OUTSIDE

Most dirt is brought in from outside. A good doormat at the entrance is essential to prevent this outdoor dirt from spreading through the house and onto the stairs.

Please note! Always cut a doormat into the floor. A doormat with a rubber backing can cause migration and discoloration.

REMOVING STAINS

For the safe removal of stains such as paint and nail polish, we recommend James Remover. Under no circumstances should you use aggressive household cleaning products that are not suitable for stairs. These will cause unnecessary and irreparable damage.
